

## HLT (HOT LIQUOR TREATMENT)

### Description

HLT is a blend of food grade acids added to the brewing liquor to reduce alkalinity and to add beneficial ions to the brewing liquor.

### Benefits

Adds Chloride and sulphate ions to the liquor.  
Ensures optimal pH through the whole brewing process.  
Helps to deliver optimal run off in mash tun clarity and stability.  
Optimises filter performance, extract yield and fermentability.

### Application and Dosage Rates

ENSURE THAT THIS PRODUCT DOES NOT COME INTO CONTACT WITH METALS IN THE BREWHOUSE AS IT WILL CAUSE CORROSION, PITTING AND RUSTING.

REFER TO THE SAFETY DATA SHEET BEFORE USING THIS PRODUCT.

### BREWERY USAGE

It is always best to add HLT to the cold liquor tank, this will help to prevent the build up of scale on the heating elements. It is important to allow sufficient time for the HLT to react with the carbonates in the water.

HLT can also be used to fine tune the pH though the brewing process, however before doing this it is advisable to do lab trials to ascertain the correct dosage.

5ml HLT per hl water reduces the Alkalinity by 18 mg/L (ppm) and increases chloride levels by 4.6 mg/L (ppm) and Sulphate levels by 6.5mg/l (ppm).

## PRODUCT CODE

3205

## PACKAGING

25 Litres 200 Litres 1000 Litres

## STORAGE

Store in original container.

Keep away from Chlorines

Recommended storage  
temperature 10-20 Degrees C.

Store away from direct sunlight.

Do not allow to freeze.

## SHELF LIFE

Use within 12 months from the  
date of manufacture.

REVISION NUMBER 001  
REVISION DATE 10/02/2026
