

LACTIC ACID 80%

Description

A food grade acid added to the brewing liquor to reduce alkalinity and control the pH in brewing. It is derived from the fermentation of beet and cane sugars.

Benefits

- Ensures optimal pH through the whole brewing process.
- Helps to deliver optimal run off in mash tun, clarity and stability.
- Optimises filter performance, extract yield and fermentability.
- Ideal for beers where the addition of anions is not wanted (Pilsners and Lagers).
- Can also be used to adjust the pH of wort or post fermentation.

Application and Dosage Rates

ENSURE THAT THIS PRODUCT DOES NOT COME INTO CONTACT WITH METALS IN THE BREWHOUSE AS IT WILL CAUSE CORROSION AND RUSTING.

REFER TO THE SAFETY DATA SHEET BEFORE USING THIS PRODUCT.

BREWERY USAGE

It is always best to add to the cold liquor tank; this will help to prevent the build-up of scale on the heating elements. It is important to allow sufficient time for the Lactic Acid to react with the carbonates in the water.

Lactic Acid can also be used to fine tune the pH though the brewing process, however before doing this it is advisable to do lab trials to ascertain the correct dosage.

5ml Lactic Acid per hl water reduces the Alkalinity by 26.4 mg/L (ppm).

PRODUCT CODE

3075

PACKAGING

25 Litres 200 Litres 1000 Litres

STORAGE

Store in original container.

Keep away from Chlorines.

Recommended storage temperature 10-15 Degrees C.

Store away from direct sunlight.

Do not allow to freeze.

SHELF LIFE

Use within 12 months from the date of manufacture.

REVISION NUMBER 001
